ELSEVIER

Comput. Methods Appl. Mech. Engrg. 161 (1998) 391–394

Computer methods in applied mechanics and engineering

Subject Index of Volume 161

Design of programs

An object-oriented implementation of structural path-following, A. Olsson 19– 47

Dynamics

A dynamic adaption algorithm for grid, time and satellite processors for nodal finite element formulations of Navier–Stokes equations, S.Ø. Wille and D. Skipitaris 215–228

Conservative motion of a discrete, hexahedral gyroscope, D. Greenspan 305–313

Elasticity

Large strain deformations of elastic shells. Constitutive modelling and finite element analysis, C. Sansour 1– 18

A posteriori error estimation in large-strain elasticity using equilibrated local Neumann problems, U. Brink and E. Stein 77–101

Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193

Numerical analysis of junctions between thin shells. Part 1: Continuous problems, M. Bernadou and A. Cubier 349–363

Numerical analysis of junctions between thin shells. Part 2: Approximation by finite element methods, M. Bernadou and A. Cubier 365–387

Finite difference methods

Thermo-mechanical modelling and sensitivity analysis for metal-forming operations, H.J. Antúnez 113–125

Integration of rational functions of bivariate polynomial numerators with linear denominators over a $(-1,1)$ square in a local parametric two-dimensional space, H.T. Rathod and M. Shafiqul Islam 195–213

Evaluation of fundamental vibration frequency of an orthotropic bending plate by using an iterative approach, Y.Z. Chen 289–296

Conservative motion of a discrete, hexahedral gyroscope, D. Greenspan 305–313

Finite element and matrix methods

Large strain deformations of elastic shells. Constitutive modelling and finite element analysis, C. Sansour 1– 18

An object-oriented implementation of structural path-following, A. Olsson 19– 47

An algorithm for gradient-regularized plasticity coupled to damage based on a dual mixed FE-formulation, T. Svedberg and K. Runesson 49– 65

A posteriori error estimation in large-strain elasticity using equilibrated local Neumann problems, U. Brink and E. Stein 77–101

A flexible automatic hexahedral mesh generation by boundary-fit method, N. Chiba, I. Nishigaki, Y. Yamashita, C. Takizawa and K. Fujishiro 145–154

Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193
A dynamic adaption algorithm for grid, time and satellite processors for nodal finite element formulations of Navier–Stokes equations, S.Ø. Wille and D. Skipitaris 215–228
A unified finite element formulation for compressible and incompressible flows using augmented conservation variables, S. Mittal and T. Tezduyar 229–243
An automatic adaptive meshing technique for Delaunay triangulations, X. Xu, C.C. Pain and A.J.H. Goddard 297–303
A large-strain elastic-plastic finite element analysis of rolling process, J.D. Lee 315–347
Numerical analysis of junctions between thin shells. Part 1: Continuous problems, M. Bernadou and A. Cubier 349–363
Numerical analysis of junctions between thin shells. Part 2: Approximation by finite element methods, M. Bernadou and A. Cubier 365–387

Fluid mechanics
A unified finite element formulation for compressible and incompressible flows using augmented conservation variables, S. Mittal and T. Tezduyar 229–243
An automatic adaptive meshing technique for Delaunay triangulations, X. Xu, C.C. Pain and A.J.H. Goddard 297–303

Fracture mechanics
An algorithm for gradient-regularized plasticity coupled to damage based on a dual mixed FE-formulation, T. Svedberg and K. Runesson 49– 65
Effect of texture on fracture of fibrous materials, V.I. Räisänen and H.J. Herrmann 103–112
Thermo-mechanical modelling and sensitivity analysis for metal-forming operations, H.J. Antúnez 113–125
Integration of rational functions of bivariate polynomial numerators with linear denominators over a $(-1,1)$ square in a local parametric two-dimensional space, H.T. Rathod and M. Shafiqul Islam 195–213
A dynamic stochastic finite element method based on dynamic constraint mode, Z. Lei and C. Qiu 245–255
A high-order pathline Godunov scheme for unsteady one-dimensional equilibrium flows, Y.-H. Tang, S.-T. Lee and J.-Y. Yang 257–288

Graphics
Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193

Incompressible and near incompressible media
A posteriori error estimation in large-strain elasticity using equilibrated local Neumann problems, U. Brink and E. Stein 77–101
A unified finite element formulation for compressible and incompressible flows using augmented conservation variables, S. Mittal and T. Tezduyar 229–243

Miscellaneous topics
An automatic adaptive meshing technique for Delaunay triangulations, X. Xu, C.C. Pain and A.J.H. Goddard 297–303

Nonlinear mechanics
Large strain deformations of elastic shells. Constitutive modelling and finite element analysis, C. Sansour 1– 18
An object-oriented implementation of structural path-following, A. Olsson 19– 47

The motion of a fast spinning disc which comes out from the limiting case $\gamma_0'' \approx 0$, A.I. Ismail 67– 76
A posteriori error estimation in large-strain elasticity using equilibrated local Neumann problems, U. Brink and E. Stein 77–101
Adaptivity and wrinkle indication in sheet metal-forming, P. Nordlund 127–143
A large-strain elastic-plastic finite element analysis of rolling process, J.D. Lee 315–347

Numerical solution procedures
An object-oriented implementation of structural path-following, A. Olsson 19– 47
A posteriori error estimation in large-strain elasticity using equilibrated local Neumann problems, U. Brink and E. Stein 77–101
Thermo-mechanical modelling and sensitivity analysis for metal-forming operations, H.J. Antúnez 113–125
Adaptivity and wrinkle indication in sheet metal-forming, P. Nordlund 127–143
Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193
Integration of rational functions of bivariate polynomial numerators with linear denominators over a $(-1,1)$ square in a local parametric two-dimensional space, H.T. Rathod and M. Shafiqul Islam 195–213
A dynamic adaption algorithm for grid, time and satellite processors for nodal finite element formulations of Navier–Stokes equations, S.Ø. Wille and D. Skipitaris 215–228
A dynamic stochastic finite element method based on dynamic constraint mode, Z. Lei and C. Qiu 245–255
A high-order pathline Godunov scheme for unsteady one-dimensional equilibrium flows, Y.-H. Tang, S.-T. Lee and J.-Y. Yang 257–288
Evaluation of fundamental vibration frequency of an orthotropic bending plate by using an iterative approach, Y.Z. Chen 289–296

Optimization and design of structures
Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193

Plasticity
An algorithm for gradient-regularized plasticity coupled to damage based on a dual mixed FE-formulation, T. Svedberg and K. Runesson 49– 65
Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193
A large-strain elastic-plastic finite element analysis of rolling process, J.D. Lee 315–347

Shells and plates
Large strain deformations of elastic shells. Constitutive modelling and finite element analysis, C. Sansour 1– 18
Evaluation of fundamental vibration frequency of an orthotropic bending plate by using an iterative approach, Y.Z. Chen 289–296
Numerical analysis of junctions between thin shells. Part 1: Continuous problems, M. Bernadou and A. Cubier 349–363
Numerical analysis of junctions between thin shells. Part 2: Approximation by finite element methods, M. Bernadou and A. Cubier 365–387

Solutions of ordinary and partial differential equations
An automatic adaptive meshing technique for Delaunay triangulations, X. Xu, C.C. Pain and A.J.H. Goddard 297–303

Stability in structural mechanics
An object-oriented implementation of structural path-following, A. Olsson 19– 47
Adaptivity and wrinkle indication in sheet metal-forming, P. Nordlund 127–143

Structural mechanics
A posteriori error estimation in large-strain elasticity using equilibrated local Neumann problems, U. Brink and E. Stein 77–101
Adaptivity and wrinkle indication in sheet metal-forming, P. Nordlund 127–143
Boundary integration of polynomials over an arbitrary linear hexahedron in Euclidean three-dimensional space, H.T. Rathod and S.V. Hiremath 155–193

Systems of linear and nonlinear simultaneous equations
Conservative motion of a discrete, hexahedral gyroscope, D. Greenspan 305–313

Viscous flow
A unified finite element formulation for compressible and incompressible flows using augmented conservation variables, S. Mittal and T. Tezduyar 229–243
